

Ovzon Pegasus

Ovzon Pegasus is our advanced, customized, high-performance service developed for the critical tasks of the most demanding customers.

Ovzon Pegasus is enabled by Ovzon 3 using Ovzon's On-The-Pause and On-The-Move terminals. The service allows high performance, mobility, and Resiliency.

Performance

The service enables transmission data rates up to 70 Mbps and reception data rates up to 200 Mbps on an Ovzon T6 Ovzon's On-The-Pause terminal. The Ovzon Pegasus service brings unprecedented throughput to/from a smaller terminal SWaP (Size, Weight, and Power) resulting in up to twice the data rate-to-weight ratio versus any spot beam on the market today.

Mobility

Ovzon's On-The-Pause terminal, the Ovzon T6, and the new Ovzon T7 can be deployed, aligned, and connected to Ovzon's network in under a minute by any operator. Ovzon Pegasus is offered through an Ovzon 3 High-Performance Steerable Beam. The High-Performance Steerable Beam can be continuously moved to support any mobile mission set.

Resiliency

The Ovzon 3 system is designed to provide high link availability in varying conditions and facilitate mobile satellite communications in any climate.

Target Markets

Government & Defense, Emergency services demanding high mobility, performance, and resiliency.

Service and Support

The services are monitored and controlled through a 24/7 centralized and decentralized Network Operations Center (NOC).

Ovzon 3 Reach

Ovzon 3 services cover Europe, Africa, the Middle East, and western Asia-Pacific. Gateways with secure backbone connectivity are in Europe, Africa, and Australia.

Disclaimer

Service is subject to availability.
